

Benefits

- Your students will develop a secure and connected understanding of the maths they are learning
- Your students will report increased confidence in using maths
- Teachers will enhance their maths subject knowledge with an emphasis on progression from GCSE topics

The Work Group is fully funded by the Maths Hubs Programme, so is **free** to participating schools.

Fully funded

Post-16 Research & Innovation WG

Teacher and School Development

What is involved?

Since returning to terminal exams students have struggled to access the content and the more complicated questions used to assess it. These sessions will concentrate on tasks that help students to develop a deeper understanding of the concepts required. In the sessions we will explore a series of activities to be used in lessons at your school. The sessions would look to develop a deeper understanding of concepts they are studying and may demonstrate to students how this is a progression of topics from GCSE.

Who can take part?

Teachers of A-level Maths in a secondary school or post-16 college.

Time Commitment: equivalent of 2 full days across the academic year
